The Acephalous Stela JdE28569
(Cairo Museum of Antiquities)

The owner of this stela is an unnamed official. The language, context and orthography points to the 18th Dynasty.

The translation does not bring out the difference. One may lean towards the second alternative since it is probable that the missing part of the stela specifies the subject.

b. The verb form of the 3ae-inf. verb $h\gamma$ is MS active participle (since the infinitive would be $h\gamma$).

He makes great inundations come to him to propagate grain in this land,

He created the people who came out of his eye.

---

1 The principal reference to these notes is G. A. Gaballa’s article JEA, 63 (1977), pp. 122-126.
2 The upper part of the stela is lost. We start the numbering beginning from the extant part.
c. This and the next passage below are introduced by the phrase *di.f iwt*... Among the six *sdm.f* forms only two uses the base stem *di* of the verb *rdi*: the circumstantial/imperfective *sdm.f* and the prospective/subjunctive *sdm.f*. As it is clear from the end of this passage, the 3MS suffixed pronoun refers to the sun-god Re. The context then clearly indicates the sense of imperfect (e.g. the yearly inundation of the Nile) so that *di.f* is circumstantial/imperfective. A further obvious example to this construction is the recurring phrase $\text{ di.i } \text{ “I let...” }$ in the Poetical Stela of Thutmose III⁴ and the lesser known caption: $\text{ imnt } \ldots \text{ di.s } \text{ “I show you the land in turmoil...” }$⁶ [Neferti 38] *di.i* is prospective/subjunctive *sdm.f*. The whole phrase *di.f iwt* is a well-known *rdi* + prospective/subjunctive construction⁷ showing also that the prospective/subjunctive of the anom. verb *iw* receives a *t* ending.

d. Three identical *r* + infinitive (of a causative verb) constructions describe the purpose of the inundations.

e. The verb form suddenly changes to circumstantial *sdm.n.f/perfect*. This verb form is usually tenseless, and here it is used to emphasize completed action. The suffix pronoun *f* refers to the sun-god Re who, according to Egyptian mythology, created mankind through tears.

f. *prt* is the feminine perfective active participle of the 3ae-inf. verb *pri*. For further justification that this passage points to Re, see the references in Gaballa’s article.⁸

---

³ We use the terminology of Standard Theory as well as Allen’s.
⁴ Amun-Re speaks to the pharaoh; for details, see this web site.
⁵ Lacau and Chevrier, Une chapelle d’Hatshepsout, 291 and pl. 14 (55).
⁶ Lichtheim’s translation.
⁷ See Allen (19.10).
(in order) to increase the objects in the temples of all the gods.

g. It is clear from the context that mnw does not mean “monuments” but “portable objects.”

h. r-pr is the Egyptian expression for “temple, chapel, shrine.”

As the Beduins in going south (upstream) have come to him, their tribute has filled the land, silver from its foreign lands, true lapis-lazuli,

their horses, their chariots, male and female servants (along) with the children of foreign rulers,

wine, incense, fresh moringa-oil, cedar, the best of unguents of the hillsides…ssndm (precious) wood 9

all (kinds of) plants of pleasant fragrance, (and) ladanum for the Ennead.

All foreign countries having (lit. under) their tribute to pacify Egypt for its lord.

i. iw n.f sttiw m hnt is an initial subordinate clause with iw a nonattributive imperfective relative form expressing initial condition.10

j. The preposition hr indicates here physical origin.

---

9 Also mentioned in [Kamose Stela 2, 14].
10 See Allen (25.11.1).
k. Variant writing of \[ \text{[image]} \].

l. Variant writing of \[ \text{[image]} \] “copper, bronze.” Note that in ancient Egypt lead was added to copper to form a copper-lead alloy. Many so-called bronze weapons (axes) were actually made of an alloy of this type (and not copper and tin).\(^{11}\)

m. Variant writing of \[ \text{[image]} \] moringa-oil (made from seeds of the moringa-tree).

n. Variant spelling of \[ \text{[image]} \].

o. Variant spelling of \[ \text{[image]} \].

p. Cistus ladanum, a shrub yielding fragrant oleoresin used to make perfumes.\(^{13}\)

q. Gaballa\(^ {14}\) states ‘The identity of the circular sign and the reading and interpretation of this group alike remain an enigma.’ The group of signs \[ \text{[image]} \] (which differs from the one in the text only by honorific transposition and the missing plural strokes) is however attested\(^ {15}\) as a variant writing of \[ \text{[image]} \] psdt “Ennead.” The association of ladanum with Osiris (a member of the Ennead) is well-known,\(^ {16}\) and in the Story of the Shipwrecked Sailor the protagonist promises the snake-god that he will bring ‘la(u)danum…which pleases all the gods.’\(^ {17}\) The phrase “ladanum for the Ennead” remains somewhat conjectural.

\[ \text{[image]} \]

\( ntk \ ntr \ ir \ tm(w) \ ^{5}nh.sn^{7} \ m \ rwd \ ^{5}wi.ki \ldots \)

You are the god who made all (men), it is by the strength of your arms that they live…

\[ \text{[image]} \]

\( h3t.i \ ^{6}h.s^{8} \ m \ ^{3}t3 \ izi.i \ ^{(s)}mn \ ^{4}hr \ ^{2}rn.i \ tp-t3 \)

My corpse united with the ground, my tomb enduring with my name surviving.
