Negated indicative/perfective sdm.f, the negative counterpart of the circumstantial sdm.n.f /perfect, starts the passage. As the context suggests, among the many meanings of the verb w3h we need to choose "leave aside, overlook, spare." The object ph(3) "plank" is derived from the verb \Rightarrow ph3 "split, break open." The hundreds of cargo ships with the sign ⁶ "hundred" in plural (or exactly 300) may be a forgivable exaggeration, though it may show the extent of the trade between Avaris and the Levant. w3d usually means "fresh, green" but here is must stand for "new, unused." (Compare with the English phrase "fresh glass" used in restaurants meaning "unused.")

The stative of the transitive verb $\stackrel{\text{def}}{=}$ mh "fill" with (stative) pronominal suffixed subject has passive meaning. It introduces a long list of booty captured from these ships.

The phrase nn tnwt st "innumerable" is a nn A construction, lit. "There is no quantity of it/them."

The adjective-verb "fine, special, noble" has two forms: \tilde{spss} (3ae-gem.) and \tilde{spsi} (4-ae-inf.), and the text uses a variant spelling of the latter.

The noun phrase inw nb nfr n $r\underline{t}nw$ can be viewed as the concluding summary of the list or as the topicalized subject of the circumstantial $s\underline{d}m.n.f$ /perfect of the (unattested) verb if with possible meaning "seize, carry off, confiscate." In the latter case it is referred to by the dependent pronoun st "them."

ni w3h.i nkt hwt-w^crt n šw.s

3m 3k wh m ib.k ir.f 3m hz wn hr dd

The negated indicative/perfective sdm.f of w3h "leave" is repeated here but turns the focus from the ships to Avaris. In the first sentence the adjective-verb sw "empty, lacking, missing, free" functions as a noun "emptiness, destitution." The 3F suffix pronoun is coreferential to the feminine noun Avaris. With these the whole prepositional phrase translated as: n sw.s "to her (own) destitution."

Alternatively, and less likely, this can be thought of a circumstantial clause of causality introduced by the preposition n "for, because." As such it should be followed by the non-attributive relative form of $\check{s}w$. This would then be an example for a passive construction: $\check{s}w$ s(i): "it was emptied."

The beginning of the next passage ${}^{\circ}3m \ 3k$ can be interpreted in two ways. First, as an independent sentence it may be a subject-stative construction ${}^{\circ}3m \ 3k$ (.w) involving the intransitive verb 3k "perish" confirming the fate of Apophis in past tense. Note that at this point of history this statement "The Asiatic has perished!" counts a little more than wishful thinking.

Second, it can be viewed as a noun phrase with 3k being a perfective active participle "fallen." The following clause $wh \ m \ ib.k \ ir.f$ has been analyzed previously. If $3m \ 3k$ is viewed as a noun phrase then the alternative interpretation $wh3 \ ib.k$ is even more possible here as it (and even the next phrase) is an extension of the long subject: "fallen Asiatic,

wicked of heart, wicked Asiatic." In either case the noun phrase $\Im m \, \underline{h} z$ is the subject of the perfective active participle wn of the verb wnn. This latter is the subject of a $\underline{h}r$ + infinitive construction: "who used to say," lit. "who existed saying."

ink nb nn snnw.i š3° r hmnw r pr-hwt-hrw hr hrp hwt-w^crt m irrw 2

w3h.i st m wš3 nn r(m)t im

Apophis' boasting starts with a simple AB nominal sentence. It is followed by the negative construction nn A. Since A has a suffix pronoun, it is negation of possession, lit. "my second is not." As such, it can be translated using the word "without." Thus, along with nb it is gives the typical phrase: "lord without equal."

The following adverbial phrases detail his control and might over an extensive domain. The compound preposition $\tilde{p} = \tilde{p} =$

In the last sentence the predicate is intentional prospective/subjunctive *sdm.f* of the verb *w3h* "leave" (as the destruction of Avaris did not happen for quite some time; actually, between the regnal years 18 and 22 of the succeeding Ahmose I, the first king of the 18th Dynasty). In the adverb clause that follows the noun wš3 "desolation" is derived from the verb wš. Used intransitively it means "fall out" (as the

_

¹ Op. cit.

² Smith and Smith, op. cit.

hair determinative suggests), but as a transitive verb it means "desolate (a place)."

hb(3).n.i nwwt.sn wbd.i st.sn ir m i3wt dšrt n dt

hr p3 hdt ir.sn m hn(w) t3 kmt

diw st hr sdm i3°s n 3mw bt3.n.sn kmt hnwt.sn

The circumstantial *sdm.n.f*/perfect of the previously used verb *hb3* "destroy, lay waste" governs the main clause. The next clause employs the indicative/perfective *sdm.f* of the verb *wbd* "burn." The clause introduced by the passive participle *ir(y)* "which have been/were made" of the verb *iri* further details the state of these places after the inferno. As Habachi³ points out, the feminine plural noun *i3wt dšrt* "red mounds" is also the modern Arabic name of several ruins including Hierakonpolis.

The preposition hr "because of, for" introduces the reason of Kamose's action, and governs a long phrase that follows. In its immediate vicinity, it governs the noun phrase p^3 hdt in which the feminine t after the masculine hd "damage" is a scribal error. Reference to the guilty party, the Hyksos, is given by ir.sn, the perfective relative form of iri (with antecedent $p^3 hdt$). The demonstrative pronoun t^3 in front of kmt points to "that (part of) Egypt," where they ruled.

The circumstantial $s\underline{d}m.n.f$ /perfect of the transitively used verb $bt3/b\underline{t}$ "abandon, forsake" has a long topicalized subject. It starts with the masculine plural perfective active participle diw "they/those who let" of the verb di "let, allow" following the pronominal object st "them(selves)" used reflexively.

They are the new target of Kamose's scorn: the Hyksos allies as well as to those who paid tribute the Hyksos. What they did is given in a hr + infinitive construction of the verb sdm.

The object of this infinitive is an indirect genitive in which the first part is the infinitive of the verb 3° is a variant of 3° s "summon."

_

³ Op. cit.

gm.n.i hr.s m dd m zh3 m hk3 hwt-wrt

'3-ws-r' z3 r' ippi hr nd-hrt nt z3.i hk3 n kši

Two sentences using circumstantial $s\underline{d}m.n.f$ /perfect verb forms describe the actual events in the past with simple grammar.

The object of the first verb is wpwt.f "his message" (not messenger), and it is referred to the second sentence by the feminine suffix pronoun .s. \Longrightarrow $k\check{s}i$ is a variant spelling of \Longrightarrow $k\check{s}$ Kush (northern Sudan). The infinitive hntyt has been discussed in the grammar of the second Semna stela of Senwosret III. The direct genitive $\check{s}t$ $zh\check{s}w$ can be translated as "written dispatch," lit. "document of writing."

 $m \underline{d}d$ in an Egyptian idiom for "as follows/the following."

 \Im -wsr-r^c ippi Auserra Apophis (with r^c in honorific transposition) is the full name of Apophis. (One may hesitate to call these the cartouche names, the prenomen and the nomen, as it would mean to acknowledge that he was a genuine pharaoh of Egypt.)

The hr + infinitive construction employing the verb $n\underline{d}$ -hrt is the first part of an indirect genitive, lit. "upon greeting of."

ḥr-mi 'ḥ'.k m ḥķ3 nn rdit rḥ.i in iw gmḥ.k irt.n kmt r.i

The two questions of Apophis here set the initially reproaching tone of the message.

These are good examples for the two kinds of questions with verbal predicate that exist in Middle Egyptian: adjunct and predicate questions. In a predicate question the very action of the verbal predicate is questioned, whereas in an adjunct question the inquiry is directed to some other part of the question.

In an adjunct question such as the first one here the interrogative pronoun mi is used. It is part of an (uncommonly topicalized) prepositional phrase hr mi "why?" lit. "on account of what?" In this construction the verbal predicate is usually a non-attributive relative form which here is hc. "you become," lit. "you stand up." Imbedded in the question is an m of predication, asserting the ruling authority of the Kushite king. (Note that m of predication identifies the person by function, "in capacity," not by essence.)

The reproach is compressed in the following adverb clause containing a $nn + \inf$ nitive construction applied to the verb rdi "let," which can be translated as "not/without letting." The clause itself contains the $rdi + \operatorname{prospective/subjunctive} s\underline{d}m.f$ construction with the prospective/ subjunctive of the verb $r\underline{h}$ "know."

In a predicate question such as the second one, the interrogative particle *in* is employed. Here, it is augmented with the particle *iw* and the following verb form of *gmḥ* "see" is circumstantial/imperfective *sdm.f.* Finally, the perfect relative form of the verb *iri* with subject *kmt* can be translated as "what Egypt has done."

hk3 nti m hnw.s K3-MSW di 'nh hr thm (w)i hr i(w)tn.i

ni ph.i sw mi ki n irt.n.f nbt r.k

$$Stp.f p3 t3 2 r i3d(t).s p3y.i t3 hn^c p3y.k hb(3).n.f st$$

This passage starts with a long but simple topicalized subject, Kamose himself. The imbedded relative clause (marked by the relative adjective *nti*) is most typical as it contains an adverbial predicate, in which the suffix pronoun .s refers to Egypt.

The hr + infinitive construction with the verb thm "drive off, penetrate, perforate" describes Kamose's action, and the adverbial phrase at the end ironically claims Apophis' ruling domain in Egypt as his own. Note the irrigated canal determinative that makes i(w)tn "land" (and not the sun-disk). This noun is not attested before and is doubtless re-

lated to the noun \triangle iwtn "ground."

With a negated indicative/perfective $s\underline{d}m.f$ of the verb $p\underline{h}$ "attack" Apophis starts to claim his innocence.

The preposition *mi* governs an unmarked noun clause. It contains an indirect genitival phrase in which the second part is the non-attributive perfect relative form *irt.n.f* of the verb *iri* (used nominally). The literal translation "like the manner of what he has done against you" needs to be polished into better English. In this clause Apophis reminds the Kushite king "what he (Kamose) has done" against the Nubian.

The predicate of the next sentence is the indicative/perfective sdm.f of the verb stp "cut up, choose" with object p3 t3 2 "the two lands," this time referring to the ruling domains of Apophis and the Kushite king. Despite the classical translations ("to persecute/afflict"), ri3dt.s "to its affliction" is a prepositional phrase with i3dt, a noun.

The object is further detailed in the phrase $p3y.i t3 hn^c p3y.k$ "my land and yours" in which the use of the possessive pronouns is only attested from the Second Intermediate Period onwards.

Apophis finishes his accusations in an independent sentence with verbal predicate, the circumstantial $s\underline{d}m.n.f$ /perfect of the previously used verb hb(3). The dependent pronoun st refers to the two lands.

mi hd m 3°

Apophis' message suddenly turns positive with the imperative mi of ii "come" and the negative imperative of the verb β^c which unfortunately is not attested elsewhere (but conjectured to have the root $\beta(y)t$.) The context, especially Apophis' reassuring words that follow allow to guess the meaning "afraid, hold back, blench."

m.k sw 3 m ^c.i

nn nt[i]h(.w) n.k hr t3 kmt m.k nn di.i n.f w3t r sprt.k

In the first adverbial sentence with a simple grammar Apophis tells the Kushite king that he has a hold on Kamose.

In the next sentence the negative particle nn indicates that the relative adjective nti

(that marks the beginning of a relative clause) is used here as a noun "one who," and together *nn nti* means "there is none who." This serves as a preposed subject for the following subject-stative construction. The verb here is 'h' and depending on the interpretation of this passage, the literary translation "stand up" can be kept or changed to "expect, wait."

The negated prospective/subjunctive *sdm.f* of the verb *di* "give" with future meaning is imbedded in the phrase *rdi w3t* "let go, set free," lit. "give the road."

Finally, note that the object of the preposition r is the sdmt.f verb form meaning "until he has/had heard." We already met the negative of this verb form in the Story of the

k3 psš.n n3 n dmiw n t3 kmt

wn [hnt-hn-]nfr hr ršwt

The particle k3 "then" marks the beginning of Apophis' wish here, as a result of the preceding sentence. As such, the fitting verb form is prospective/subjunctive sdm.n.f. The plural demonstrative pronoun n3 n is used here to refer to those towns of Egypt that are still under Kamose's rule.

In the last sentence the prospective/subjunctive $s\underline{d}m.f$ of wnn makes the adverbial predicate function as a future wish $\underline{h}r$ $r\check{s}wt$ "in joy," lit. "under joy." The subject is a place (though it lacks the correct determinative), and one would expect here the two lands, but among the few, the most possible restoration $\underline{h}nt-\underline{h}n-nfr$, is not a well-understood locality.

⁴ [ShS. 32].
